

What is a Browser and How does it Work?

Last Updated : 04 Apr, 2025

Improve

When we need any kind of information, most of the time we get help from the Internet, and we get information. The Internet provides us with useful information easily. We use mobile phones, computers, and tablets. We search for a lot of things in our daily lives, so we get information from all over the world, but we can not get information by just only getting connected to the Internet. We need a platform where we can search for our questions. The platform that provides such kinds of services is called a web browser; without a web browser internet will not be able to provide information.

What is a Web Browser?

The web browser is an application software to explore www ([World Wide Web](#)). It provides an interface between the server and the client, and it requests the server for web documents and services. It works as a compiler to render HTML, which is used to design a webpage. Whenever we search for anything on the internet, the browser loads a web page written in HTML, including text, links, images, and other items such as style sheets and JavaScript functions. Google Chrome, Microsoft Edge, Mozilla Firefox, and Safari are examples of web browsers.

History of the Web Browsers

The first web browser World Wide Web, was invented in the year of 1990 by Tim Berners-Lee. Later, it becomes Nexus. In the year of 1993, a new browser, Mosaic, was invented by Mark Andreessen and their team. It was the first browser to display text and images at a time on the device screen. He also invented another browser, Netscape, in 1994. The next year, Microsoft launched a web browser, Internet Explorer, which was already installed in the Windows operating system. After this, many browsers were invented with various features like Mozilla Firefox, Google Chrome, Safari, Opera, etc. For more details, refer to this article: [History of Web Browsers](#)

The choice of a web browser depends on the user's preference and requirements. To know more about individual browsers please go through our [Web Browser – A Complete Overview](#)

How Does a Web Browser Work?

A web browser helps us find information anywhere on the internet. It is installed on the client's computer and requests information from the web server; such a type of working model is called a client-server model.

Client-server model

The browser receives information through [HTTP protocol](#). In which transmission of data is defined. When the browser received data from the server, it is rendered in HTML to user-readable form and, information is displayed on the device screen.

Website Cookies

When we visited any website over the internet our web browser stores information about us in small files called [cookies](#). Cookies are designed to remember stateful information about our browsing history. Some more cookies are used to remember about us like our interests, our browsing patterns, etc. Websites show us ads based on our interests using cookies.

Some Popular Web Browsers
