### What is a Browser and How does it Work?

# What is a Browser and How does it Work?

Last Updated: 04 Apr, 2025

When we need any kind of information, most of the time we get help from the Internet, and we get information. The Internet provides us with useful information easily. We use mobile phones, computers, and tablets. We search for a lot of things in our daily lives, so we get information from

all over the world, but we can not get information by just only getting connected to the Internet. We need a platform where we can search for our questions. The platform that provides such kinds of services is called a web browser: without a web browser internet will not be able to provide information.

## What is a Web Browser?

The web browser is an application software to explore www (World Wide Web). It provides an interface between the server and the client, and it requests the server for web documents and

services. It works as a compiler to render HTML, which is used to design a webpage. Whenever we search for anything on the internet, the browser loads a web page written in HTML, including text, links, images, and other items such as style sheets and JavaScript functions. Google Chrome, Microsoft Edge, Mozilla Firefox, and Safari are examples of web browsers.

# History of the Web Browsers

The first web browser World Wide Web, was invented in the year of 1990 by Tim Berners-Lee. Later. it becomes Nexus. In the year of 1993, a new browser, Mosaic, was invented by Mark Andreessen and their team. It was the first browser to display text and images at a time on the device screen. He also invented another browser, Netscape, in 1994. The next vear. Microsoft launched a web browser. Internet Explorer, which was already installed in the Windows operating system. After this, many browsers were invented with various features like Mozilla Firefox, Google Chrome, Safari, Opera, etc. For more details, refer to this article:

**History of Web** 

**Browsers** 

The choice of a web browser depends on the user's preference and requirements. To know more about individual browsers please go through our Web **Browser –** A **Complete** 

Overview

#### How Does a Web Browser Work?

A web browser helps us find information anywhere on the internet. It is installed on the client's computer and requests information from the web server; such a type of working model is called a client-server model.

Client-server model

The browser receives information through HTTP protocol. In which transmission of data is defined. When the browser received data from the server, it is rendered in HTML to user-

readable form and, information is displayed on the device screen.

#### Website Cookies

When we visited any website over the internet our web browser stores information about us in small files called cookies. Cookies are designed to remember stateful information about our browsing history. Some more cookies are used to remember about us like our interests, our browsing patterns, etc. Websites show us ads based on our interests using cookies.

#### Some Popular Web Browsers

Here is a list of 7 popular web browsers:

Developed by Google, Chrome is one of the most widely-used web browsers in the world, known for its speed and simplicity.

Developed by the Mozilla
Foundation,
Firefox is an open-source browser that is known for its privacy features and customization options.

Developed by Apple, Safari is the default browser on Mac and iOS devices and is known for its speed and integration with other Apple products.

Developed by
Microsoft, Edge is
the default
browser on
Windows 10 and
is known for its
integration with
other Microsoft
products and
services.

Developed by The Tor Project, Tor Browser is a web browser that is designed for anonymous web browsing and is based on Mozilla Firefox.

#### 6. Opera:

Developed by
Opera Software,
Opera is a web
browser that is
known for its
speed and built-in
VPN feature.

#### 7. Brave:

Developed by
Brave Software,
Brave is a web
browser that is
focused on
privacy and
security and
blocks third-party
ads and trackers
by default.

These are some of the most popular web browsers, there are other browsers available such as Vivaldi, Waterfox, and so on. The choice of a web browser depends on the user's preference and requirements.
